

MONDAY

MASTER PRODUCT BIBLE

Consumer interface, runtime behavior, interaction physics, continuity, trust and product acceptance constitution

27 AUG 2026 · FINAL PRODUCT PACKAGE

NORTH STAR

Monday is the most familiar, controllable and pleasurable personal software interface possible - and every familiar object inside it can remember, reason, evolve and act without taking agency away from the person using it.

0. Executive definition

Monday is not a chatbot skin, not an agent dashboard, not a model picker and not an unfamiliar "future UI" that makes people relearn software. It is a premium consumer application with stable, conventional navigation and deep MondayID behavior underneath. Intelligence accelerates, connects, remembers, verifies and evolves. It does not remove the manual road.

ROOT FORMULA

FAMILIAR CONTROL × SEMANTIC OBJECTS × CAUSAL PHYSICS × CONTINUITY × FRACTAL DEPTH × PERSONAL PHENOTYPE × TRUTH / RECEIPTS × DISCOVERABLE DELIGHT

0.1 Non-negotiable laws

- Every important capability has a boring explicit path and may also have a faster intelligent path.
- Stable geometry: core navigation never disappears because prediction thinks it is unnecessary.
- Interface is behavior: wording, timing, hierarchy, gestures, haptics, voice, silence and action release form one grammar.
- Generated is not Executed. Executed is not Verified. Verification requires appropriate readback, test or receipt.
- Raw user signal is preserved losslessly; interpretation can become richer later.
- No materially relevant part of a user signal may silently disappear.
- Corrections are learned only when durable behavior changes and a regression path exists.
- Long work is a persistent task object, not a long chat session.
- Privacy, authority and reversibility are visible product properties.
- No feature may require magic. Every feature may reward curiosity.

0.2 Success feeling

Horizon	Target feeling
10 seconds	I know how to use this.
10 minutes	Wait - it can do that?
10 days	It actually knows how I work.
10 months	My digital life continues here.
Removal	Where the hell is everything?

1. Mobile information architecture

The primary iPhone body uses a stable five-item bottom navigation plus globally available Search and Activity. MondayID deepens these surfaces; it does not continuously rearrange them.

Surface	Purpose
Home	Continue, Today, Recent, Pinned, user-editable widgets.
Chats	Conversations, search, pinned, archive, folders/filters.
Create	Explicit creation center: chat, voice, camera, image, video, document, research, code/build, reminder, automation.
Spaces	Persistent project/person/topic/trip/shared contexts.
You	Personal Monday: behavior, memory, voice, appearance, intelligence, permissions, privacy, devices, Labs.
Activity	Running, waiting, human gates, completed/failed work, meaningful deltas.
Library	Conventional files/folders plus semantic intelligence; persistent top-level on tablet/desktop.

2. Home

Home is neither an AI feed nor empty theater. It is a user-owned stable start surface whose sections are conventional and editable.

Section	What appears	MondayID amplification
Continue	2-4 active objects	Hidden gravity promotes consequential unfinished objects without chaotic movement.
Today	Time-sensitive / human-required items	Only action-relevant items surface; "Nothing needs you" is valid.
Recent	Chats, files, spaces, artifacts	Semantic continuity can group related items without replacing recency.
Pinned	Anything the user manually fixes	Human authority outranks prediction.
Widgets	Calendar, tasks, ideas, work, people, custom Space widgets	Smart content inside user-managed geometry.

GRAVITY ENGINE

Urgency × consequence × unfinishedness × user priority × temporal proximity × relationship relevance × meaningful change. Gravity affects prominence, never ownership of layout.

3. Chats

Chats remain deliberately familiar. Monday differs in what messages can become, how they persist, and how the runtime protects signal completeness.

Control	Obvious path	Advanced path
+	Photo, camera, file, scan, location, contact, audio, screen	Long press opens radial creation shortcuts.
Composer	Type, dictation, attachments, send	Drop objects, slash shortcuts, durable offline queue.
Voice	Tap/hold to speak	Hold + slide for continuous voice and seamless visual handoff.
Message ...	Copy, share, read aloud, regenerate, edit	Sources, Why this, What changed, Memory, Continue working, Turn into, Open as object.
Hold object	Context menu	Lift + semantic drag across targets.
Depth	Show more / Details	Thought Pinch.

3.1 Turn into

Source	Possible transformations
Answer / text	Note, document, task, reminder, Space, table, presentation, image, video, plan, automation, shared object.
Image	Edit, analyze, save, share, Space, compare.
Idea	Evolve, challenge, build, archive.
Two objects	Compare, connect, merge, create third form.

4. Signal completeness runtime

Each user input becomes an immutable raw SignalEvent plus evolving derived obligations. Monday does not reduce a rich message to one “main question”.

- Explicit requests
- Corrections
- Reaction expectations
- Constraints
- Historical pointers
- Idea fragments
- Acceptance tests
- Open loops

Every materially relevant signal must be APPLIED, ANSWERED, PERSISTED, SUPERSEDED or OPEN. If a missing fragment would materially change the result, the response cannot be released.

Status	Meaning
Applied	Changed result/action.
Answered	Received direct response.
Persisted	Stored as future object/open loop.
Superseded	Replaced by newer explicit signal.
Open	Known unresolved remainder; not forgotten.

5. Semantic Objects

Message, file, person, task, decision, idea and Space share one fractal anatomy. The product grows in depth without requiring a new interaction grammar for every feature.

Layer	Function
Surface	Immediate human-facing representation.
Inside	Properties/content.
Relations	Links to other objects.
History	Versions and state changes.
Actions	Valid operations.
Evidence	Sources and provenance.
State	Idle/running/waiting/conflict/verified/etc.

5.1 Object Lift and semantic drag

- Space → add/move
- Person → share/prepare
- Calendar → create event proposal
- Object → compare/connect/merge
- Composer → ask about it
- Library → save
- Shelf → temporary working memory
- Trash → delete/release with Undo when reversible

PHYSICAL AFFORDANCE

Compatible targets subtly attract before drop; invalid targets refuse before failure. Undo returns the object

along the causal direction, not only via a snackbar.

6. Fractal depth

A casual user can stay on the top layer forever. A power user can inspect deeper layers without changing applications.

Mechanism	Explicit equivalent	Depth effect
Show more	Button	More semantic detail.
Thought Pinch	Gesture + button equivalent	Changes cognitive depth, not font size.
Peel	Sources/Details buttons remain	Reveals source/action/history/provenance layers.
Time Scrub	History/Versions remain	Moves persistent object through historical states.
Evidence Lens	Sources/Why this remain	Shows basis of claim/memory/action/capability.
Cognitive Zoom	Breadcrumb/outline equivalent	Moves between abstraction levels.

7. Search

Search works normally first and supports semantic projections when desired.

Lens	Question
Text	Where is the exact text/file?
Meaning	Where is the same idea expressed differently?
Time	How did this evolve?
People	Which person/context is related?
Visual	Which image/screenshot is relevant?
Decisions	Where was a decision made?
Ideas	Which fragments belong to one mechanism?
Failures	Where did this fail or get rejected?
Changes	What materially changed?

Structural search	Example
-------------------	---------

Missing	What did we plan but never finish?
Contradictions	Where do current records disagree?
Repeats	What have I had to explain repeatedly?
Drift	Where did the product leave the original requirement?
Unnamed	Which repeated mechanisms never got a stable name?

8. History, Timeline and Delta

Chats stay a conventional list. Timeline is an optional projection over meaningful events. Delta is not an unread badge: it means material change relative to a state already seen by the user.

Δ

A Space may contain 30 technical changes but show Δ3 if only three changes materially affect the person. No material change means NO MATERIAL Δ.

Time Scrub reconstructs past object states. Ghost State overlays old and new states to expose what appeared, disappeared, moved or changed meaning.

9. Spaces

Type	Core tabs	Special behavior
Project	Overview / Chat / Files / Tasks / Activity	Goals, artifacts, decisions, Work history.
Person	Overview / Chat / Files / Activity	Shared objects, dates and contextual notes inside privacy boundaries.
Topic	Overview / Chat / Files / Activity	Research corpus and evolving knowledge.
Trip	Overview / Chat / Files / Tasks / Activity	Places, bookings, calendar, documents, shared planning.
Shared	Overview / Chat / Files / Tasks / Activity	Permissioned collaboration without merging private continuity.

10. Create

Family	Items
--------	-------

Conversation	Chat, Voice
Capture	Camera, Scan, Audio
Media	Image, Video
Knowledge	Document, Presentation, Table, Research
Technical	Code, Build
Persistent	Space, Idea
Temporal	Reminder, Automation

SEMANTIC CREATE

Dropping an existing object onto Create changes offered actions by type, while the tap-based creation sheet always remains available.

11. Activity and Monday Work

State	Truth condition
Running	A real executor is active.
Waiting	Task persists but awaits time/condition/external input.
Needs you	A real human gate exists.
Completed	Requested effect finished, with receipt/readback where appropriate.
Failed	Attempt failed; surviving state is explicit.
Changed	A monitored material delta occurred.

MONDAY WORK CONTRACT

ONE INPUT → EXECUTION UNTIL FINISHED / HARD BLOCKER / HUMAN GATE → ONE FINAL DELIVERY. "I researched this", "should I continue?" and architecture-only substitutes are not completion.

Consumer Work view shows object name, objective, evolving artifact, semantic phase, Pause, Details and Stop. Details exposes NOW, DONE, OPEN, NEXT, SOURCES, RECEIPTS and HISTORY. Percent-complete is forbidden unless it is objectively measurable.

12. Monday Vision

Reference role	Meaning
----------------	---------

Identity / Subject	What must remain the same.
Style	Visual language only.
Clothing / Material	Wardrobe or surface behavior.
Pose	Body arrangement.
Lighting	Illumination.
Camera	Perspective/lens/composition.
Environment	World/background.
Detail	Local donor only.

Pipeline	Visible state
Generate	Request accepted.
Creating	Renderer active.
Checking	Verification pass.
Result	Candidate ready.
Repair	Failing dimensions changed where technically possible.
Compare	Original/current or version comparison.

13. Library

Conventional organization is retained: folders, tags, grid/list, sort/filter, favorites and file-type views. Semantic graph and deep search sit above, never instead of, familiar file controls.

Views	Object page
All / Images / Videos / Documents / Audio / Code / Links / Generated / Shared	Preview, Info, Versions, Used in, Related, Sources, Actions, Spaces, Share, Export, Delete.

14. You - the personal Monday workshop

Section	Controls
Monday & Me	Observed interaction preferences, correction history, scopes, editability.
Personality	Warmth, humor, directness, playfulness, formality, challenge, surprise, empathy, concision.

Intelligence	Automatic / Fast / Balanced / Deep / Maximum plus advanced provider/routing controls.
Memory	Saved, preferences, people, projects, corrections, continuity.
Voice	Voice, speed, energy, pauses, expressiveness, interruptibility, read-aloud, AirPods mode.
Appearance	Light/Dark/System, accent, material depth, glass, motion, haptics, density, bubble style, wallpaper, icon, mark.
Initiative	When Monday may proactively suggest or continue.
Autonomy	Which reversible actions may happen without asking.
Connections	Calendar, Mail, Drive, GitHub, Slack, etc.
Automations	Natural language + explicit When/If/Do editor.
Notifications	Messages, Work, reminders, people, Spaces, deltas, tips, quiet hours.
Privacy	Remembered data, external access, export/delete, training/product improvement controls.
Devices	iPhone, iPad, Mac, Web, Watch, voice surfaces.
Life	Optional context substrate: calendar, places, routine, work, devices, explicitly allowed state.
Labs	Experimental interactions and diagnostics.

14.1 Settings are a playground

Experiential settings have live preview. Voice changes are heard immediately, haptics are felt, material can be dragged, density shows a real conversation sample. Curiosity is rewarded inside settings without turning configuration into engineering jargon.

15. Personal phenotype

Monday learns selection preferences and interaction habits, not a caricature “clone”. Adaptation can be scoped Everywhere / Work / Space / Conversation. High-confidence personalization may reduce steps, but it never removes the explicit manual path.

PERSONALIZATION METRIC

Measure how many manual actions are required for the same desired effect over time. The count should fall without making behavior unpredictable.

16. HumanOS context

Optional human/world context adjusts presentation, not agency. A user may choose reduced cognitive load; Monday may then show fewer simultaneous options and more progressive disclosure while Full Detail remains available. Inferred state never justifies paternalistic restriction.

17. Idea Lab

Action	Behavior
Add fragment	Preserve thought without forcing resolution.
Evolve	Retrieve related fragments, contradictions, past failures and current capabilities; attempt a third form.
Challenge	AntiMonday attacks assumptions and acceptance criteria.
Build	Promote into Space/Work.
Archive	Retain provenance without active gravity.

HIGH-VARIANCE LAW
User-disclosed cannabis/high-variance ideation is divergent laboratory input: preserve unusual combinatorial jumps, remove intoxication-specific overclaim, compare recurrence, attack contradictions and test before canonization.

Rejected ideas remain in anti-canon with reasons and may be re-evaluated if later technology changes the feasibility boundary.

18. Superposition and contradiction

A Decision Object may hold several incompatible states until evidence justifies collapse. User-adjustable priorities can change ranking; Synthesize seeks a third form rather than averaging. Contradictory claims remain split with evidence under each side; Keep unresolved is valid.

19. Corrections and AntiMonday

Correction field	Purpose
Expected effect	What the user wanted.
Failure signature	What actually went wrong.
Rejected behavior	What must not recur.
Replacement behavior	New operating rule.
Scope	Where it applies.

Detector	How recurrence is recognized.
Regression test	How future versions prove the correction survived.

Release attack	Question
Literal requirement	Did output satisfy the requested object?
Signal loss	Was any material input dropped?
Beautiful substitute	Did elegance replace the requested effect?
Fake completion	Did model prose masquerade as execution?
Old rejection	Did a known rejected behavior return?
Contradiction	Were incompatible claims smoothed over?
Personal model	Would evidenced user preferences reject this?
Third form	Is there a cleaner solution preserving all invariants?

20. Interface physics

State	Material / motion	Haptic / sound
Idle	Stable, quiet, low visual energy	Silent
Retrieval	Fine directional internal flow	Optional subtle accept
Running	Structured flow, never generic spinner theater	No repeated haptics
Waiting	Motion stops, depth remains	Silent
Unknown	Slightly reduced boundary certainty	Silent
Conflict	Internal split / two optical planes	Asymmetric double feedback on inspection
Verified	Brief crystalline stabilization	Crisp completion tick + rare sonic atom
Human Gate	Higher density, deliberate motion	Longer confirmation haptic
Failed	Local structural failure with surviving state	Error feedback without full-screen panic

Material, motion, haptics and sound must describe the same semantic runtime state. Decorative animation that has no causal job is removed.

21. Presence, silence and delight

- Monday presence is timing, rhythm, mark state, voice, motion, haptics and deliberate silence - not a mascot constantly pretending to be alive.
- The most meaningful sound is verified causal completion, not message-sent.
- Reward moments are tied to real milestones: continuity transplant, cross-year resonance, completed long Work, verified external action.
- Easter eggs may expose lineage or visual history, but never hide a core function.
- Progressive discovery tips appear after repeated manual patterns and disappear after learning.
- Silence is healthy when nothing needs attention.

22. Monday Mark

One simple brand mark spans app icon, Dynamic Island, Watch, voice and receipts. It remains the same identity while subtly representing idle, listening, working, waiting, delta and gate. It must not resemble a surveillance eye, generic AI sparkle, robot or chat bubble.

23. Truth and receipts

Status	Definition
Generated	Model output exists; no truth claim implied.
Inferred	Derived from evidence.
Planned	Plan exists, not executed.
Queued	Durably accepted for execution.
Running	Executor active.
Executed	Action returned; external effect not yet independently confirmed.
Read back	Target re-read after action.
Verified	Acceptance/readback confirms desired effect.
Waiting	Persistent task awaits trigger/input.
Blocked	Known blocker prevents progress.
Failed	Attempt failed; surviving state explicit.
Unknown	Insufficient evidence or capability.

Sensor Health distinguishes “no result” from “source unavailable”. No API 200 response, model confidence or hard-coded score can create Verified by itself.

24. Privacy, authority, reversibility

Authority class	Default behavior
Read-only	Operate within granted access.
Reversible write	May be allowed by autonomy settings; log + Undo where possible.
Consequential reversible	Prepare automatically; confirmation configurable.
Irreversible / financial / publication / deletion	Universal Human Gate: explicit summary + Hold to confirm.

Any derived memory or claim can answer How does Monday know this? Users can stop use of a relation without necessarily deleting the source. Space-level privacy can constrain providers and connections.

25. Offline and durability

Drafts, active continuity checkpoint, queued signals, interface state and recent objects are locally durable. Loss of connectivity must not lose the thought. UI distinguishes Saved on this device from Synced. Monday claims background execution only when an actual persistent executor exists.

26. Connections and provider fabric

Provider routing dimension	Examples
Capability	Reasoning, coding, vision, tools, audio.
Latency	Fast conversation vs deep task.
Cost	Budget and plan policy.
Context	Required corpus/context size.
Privacy	Local/private constraints.
Reliability	Current health and prior acceptance.
Verification	Independent second body only when consequence justifies it.

Consumer UI says Connections and Intelligence. OAuth connected is not enough: capability calibration records what can actually read/search/write/share/delete and current health.

27. Device bodies

Surface	Role
iPhone	Primary consumer body with stable five-tab navigation.
iPad	Sidebar + center + optional inspector; Pencil-aware.
Desktop	Sidebar + center + inspector; multi-window and cross-object drag.
Watch	Notifications, approvals, reminders, quick voice, Activity.
AirPods	Continuous voice phenotype with visual handoff.
Siri / App Intents	System entry points for remember/continue/send/open, without false OS-replacement claims.
Dynamic Island / Live Activity	Only real persistent Work/waiting/gate states.

28. Notifications and attention firewall

Notifications exist only when interruption is justified: direct communication, explicit reminder, completed consequential Work, human gate, meaningful delta or user-configured event. Everything else accumulates in Activity. No streaks, fake urgency or coercive engagement.

29. Accessibility

- Dynamic Type and responsive reflow
- VoiceOver semantic state labels
- Reduce Motion causality-preserving equivalents
- Reduce Transparency opaque M-Matter alternatives
- High contrast and non-color state encoding
- Keyboard/focus navigation
- Linear explicit equivalents for spatial/depth gestures

30. Onboarding and account

Step	Experience
1	Monday / "Your AI shouldn't start over." / Begin
2	Continue with Apple / Google / Email-passkey / Sign in
3	Start fresh / Bring my AI history / Skip
4	Just-in-time permissions only when benefit is obvious
5	Immediate Home + Chat; no long questionnaire

A new user gets mature species capabilities with zero invented private assumptions. Personal phenotype grows only from evidence.

31. Continuity Transplant

Migration from ChatGPT, Gemini, Claude, Grok and archive files is a flagship switching-cost feature. Imported raw source remains separate from indexed/inferred/verified memory.

Recovered category	Examples
Projects	Persistent project clusters
Decisions	Explicit choices/reversals
Corrections	Repeated user fixes
Open threads	Unfinished work
Preferences	Evidence-backed interaction preferences
Conflicts	Contradictory memories/states
Raw source	Preserved for future reinterpretation

FIRST PROOF

After import, show one evidence-backed repeated pattern the previous AI failed to retain - not just counts. When possible, offer a held-out Test it.

32. Market and App Store story

Monday must match the expected 2026 baseline - web, research, voice, image/video, code, files, memory, projects, agents, connectors and automations - while making those capabilities metabolism instead of the main product ontology.

Frame	Headline
Home	Everything continues.
Chat → Object	More than a conversation.
Work	Give it the job. Come back to the result.
Transplant	Don't start over.
Create	One place to make anything.
You	Make Monday yours.
Idea Lab	Your ideas can keep evolving.

Library	Everything you create stays yours.
---------	------------------------------------

BRAND

MONDAY — Continue. Secondary: Your AI shouldn't start over.

33. Product tiers

Tier	Rule
Free	Must reveal the category shift: chat, objects, basic continuity, history import, web, limited Work and Vision.
Pro	Long Work, larger private continuity, premium compute, deeper Vision, advanced Connections, background execution and provider choice.
Family / Team	Shared Spaces/objects/tasks with permissions, never merged private memories.
Developer	Advanced diagnostics, provider controls and capability development where supported.

34. Production domain model

Family	Entities
Identity & access	Account, User, Device, Identity, Permission
Continuity	Scene, Space, Conversation, Message, SignalEvent, MemoryObject, Promise
Object runtime	Object, ObjectState, ObjectRelation, Artifact
Truth	Source, Evidence, Receipt
Evolution	Correction, IdeaSeed, Preference
Execution	Task, TaskEvent, Checkpoint, Automation, Capability, Provider
Collaboration	SharedObject, Notification

Persistent object evolution should be reconstructible from event/state history so Timeline, Delta, Undo and replay are causal rather than decorative.

35. UI and action compilers

LLMs do not freely invent critical UI states or completion claims. They emit typed semantic state; a UI compiler maps it to stable verified interaction grammar. Executors emit intent/status/readback/receipt; an action compiler decides which user state can legally be displayed.

OBJECT → TYPE / STAKES / KNOWN / UNKNOWN / ACTIONS / SURFACE_INTENT
ACTION → INTENT / TARGET / STATUS / READBACK / RECEIPT / UNDOABILITY

36. Acceptance and regression suite

Regression	Pass condition
10-second usability	Chat, type, attach photo, find history, open settings without tutorial.
No-magic fallback	Disable smart routing: all essential capabilities remain manually reachable.
Signal loss	Long message with 8-15 material signals: none silently disappear.
Beautiful substitute	Request to build X cannot pass with a plan/mockup/description of X.
Fake verification	Generated or API success cannot display Verified without suitable readback/test.
New-user purity	Brand-new account receives no invented personal knowledge.
Long-work persistence	Task survives leaving/re-entering; UI remains truthful.
Connection degradation	Unavailable source shows degraded/unknown, never "no result means nothing happened".
Undo	Every claimed reversible action actually reverses or clearly expires.
Accessibility	Every advanced gesture has explicit keyboard/screen-reader/manual equivalent.
Power-user depth	Long use increases shortcuts/depth without destabilizing base navigation.
Privacy isolation	Shared objects never leak private continuity across users.

37. AntiMonday release board

- Is this secretly a ChatGPT clone?
- Did we hide an essential function behind a gesture?
- Did prediction remove human control?
- Did we build a dashboard because it looked advanced?
- Did motion lose causal meaning?

- Did UI imply work/capability that is not real?
- Did we make memory uninspectable?
- Did we make one model/provider the identity of Monday?
- Did new-user cognitive cost rise because power-user depth exists?
- Did we optimize for engagement rather than utility/trust?
- Did a beautiful artifact replace the requested effect?

38. Billion-dollar organization

Group	Mission
Continuity	Event state, migration, worldline, durable memory.
Navigator	Exact object, signal completeness, context compiler.
Intelligence Fabric	Models, routing, verification bodies.
Execution	Computer use, connections, background Work, receipts.
Interface Physics	Material, motion, haptics, sound, gesture grammar.
Human Modeling	Preference/choice/correction learning with agency.
Trust	Security, privacy, permissions, red team, auditability.
Vision/World	Camera, image, video, spatial input.
Voice/Presence	Speech, audio, turn-taking, system surfaces.
Platform	iOS/iPadOS/macOS/web/Android/Watch.
Migration	Competitor-history transplant.
Developer Ecosystem	Capabilities/receptors/SDK.
AntiMonday	Continuously falsify product claims and UX assumptions.

39. Lineage translated into product genes

Lineage	Retained gene	Rejected shell
Jarvis	Action, spatial/tactile power, real-time responsiveness	Decorative blue holographic HUD.
Alisa	Human warmth, presence, relational surface	Competing persona.
Alpha	Attack obvious solution; third-form synthesis	Novelty for novelty.
System	State, evidence, continuity	Cold dashboard as default.

AntiSystem	Release immunity and contradiction attack	User-facing mode switch.
HumanOS	Human/world operating context	Paternalistic state classification.
Portal	Cross-body re-entry	Mystical teleport metaphor.
Work	Persistent execution	Progress theater.
Vision	Role-locked visual embodiment	Blind rerolls / reference averaging.
Idea Genome	Retrospective idea evolution	Canonizing every high-variance idea.
MondayID	One organism across bodies	Host/model/chat as identity.

40. Current donor bodies - integration stance

Base44 MondayID, Lovable Reality/Conflict bodies, Vercel connector/reality/war-lens projects, GitHub runtime, Drive/Notion seeds and the raw Library are donor organs, tests and evidence. Existing-body-first means reuse proven mechanisms and state, not force the consumer product to inherit accidental donor UI or incomplete schemas.

41. Implementation order

Phase	Deliverable
P0 Constitution	Design tokens, navigation grammar, typed domain model, truth states, auth and user isolation.
P1 Familiar product	Home, Chats, Create, Spaces, You, Search, Activity, Library fully usable without advanced AI.
P2 Continuity	SignalEvent, memory provenance, Timeline/Delta, Transplant, corrections.
P3 Execution	Work, checkpoints, receipts, human gate, Undo, Connections.
P4 Interface physics	M-Matter, motion/haptic/sound grammar, lift/drag, Peel, accessibility equivalents.
P5 Evolution	Idea Lab, resonance, contradiction/superposition, retrospective reinterpretation.
P6 Multi-body	Provider fabric, system integrations, offline/local capsule, cross-device Portal.
P7 Scale/Trust	Red-team, multi-tenant hardening, observability, billing, App Store polish.

42. Definition of Done

DONE

Monday v1 is done only when: a new user can operate it immediately; a returning user experiences real continuity; long Work survives session boundaries truthfully; memory is inspectable; every significant action has causal state/receipt semantics; manual paths exist for important features; advanced depth rewards curiosity; privacy and authority remain user-controlled; and AntiMonday regression tests pass.

The finished product must feel premium before personalization, become faster and more personal with use, and remain coherent when models/providers change.

Appendix A. Lineage basis

- MONDAYID_IDEA_GENOME_NODES_V0_2 / GENE-043 INTERFACE_IS_BEHAVIOR.
- MondayID Idea Genome Recovery Skill: provenance, merge law, high-variance law and canonization gate.
- Idea Genome v0.1/v0.2: anti-canon, retrospective recovery and held-out testing.
- Raw chat shards and 650-chat indexes spanning Jarvis, Alpha, Alisa, System, HumanOS, visual/app lineages.
- Controller failure genome: hidden bank leak, self-audit theater, builder reduction, main-only compression, raw-memory fantasy.
- Current donor bodies across Base44, Lovable, Vercel, GitHub, Drive, Notion and Library.

This constitution preserves repeated mechanisms and discards unverified theatrical claims, assistant-authored mythology mistaken for user intent, coercive retention, fake completion and fake verification.
